

abby's hope

Thoughtfully Balanced. Intentionally Formulated.

Abby's Hope is a carefully formulated medical cannabis oil developed through years of refinement and real-world observation. The formulation centers on a balanced cannabinoid profile designed to support calm, regulation, and overall quality of life.

The Formula

600 mg CBD : 300 mg THC : 300 mg THCa

This 2:1:1 ratio was selected to provide:

- The steadying properties of CBD
- The therapeutic synergy of low-dose THC
- The added cannabinoid support of THCa

Together, these cannabinoids work in concert through the endocannabinoid system, which plays a role in mood regulation, stress response, neurological signaling, and overall balance.

The goal of this formulation is not sedation, but steadiness.

Observed Areas of Support

In its original development, this ratio was associated with meaningful improvements in daily function and overall comfort.

Patients may experience support for:

- Emotional regulation
- A calmer baseline state
- Reduced intensity of disruptive behaviors
- Smoother transitions throughout the day
- Improved daily rhythm
- Greater engagement in activities and social participation
- Overall quality of life

Why This Ratio Matters

High-CBD formulations may provide grounding support without overwhelming psychoactivity. The inclusion of controlled, low-dose THC and THCa allows for enhanced therapeutic synergy, often referred to as the entourage effect, which may improve the overall effectiveness of the formulation compared to single-cannabinoid products.

The result is a balanced profile designed to support the nervous system while maintaining clarity and function.

Now available exclusively at  **BOTANICAL SCIENCES**

Botanical Sciences operates under a vertically integrated Class 1 license in Georgia, cultivating, manufacturing, and dispensing medical cannabis with strict standards for purity, consistency, and patient-focused care. Learn more at botanicalsciences.com

Available only to registered Georgia medical cannabis patients with qualifying conditions. Individual results may vary. Medical cannabis is not intended to diagnose, treat, cure, or prevent any disease.

abby's hope

Some products are developed. This one was lived.

A letter from Jennifer

Abby's Hope was created through years of trial, error, and love. It began as something deeply personal, a formulation developed to support my daughter Abby through some of her hardest seasons.

Abby is nonverbal and profoundly autistic. When she was younger, severe self-injurious behaviors affected her safety and daily life. After carefully refining cannabinoid ratios and maintaining consistency, we began to see meaningful changes. Abby experienced more calm, smoother transitions, and a greater ability to engage in the world around her.

For our family, that shift meant everything. It meant more school days, more outings, more connection. More Abby.

As other families began asking about our experience, I knew that if Abby's Hope was ever going to be shared more broadly, it had to be done the right way, safely, responsibly, and under the highest medical standards.

That is why I chose to partner with Botanical Sciences.

Botanical Sciences is Georgia's leading state-licensed medical cannabis provider and the first physician-founded Class 1 license holder in the state. Their foundation in medicine, clinical integrity, and rigorous quality standards gave me confidence that Abby's Hope could reach qualified Georgia patients with the care and oversight they deserve.

Together, we are making this formulation available through Georgia's medical cannabis program, exclusively at Botanical Sciences dispensaries.

My hope is simple. More good days for families who need them.

With gratitude,

Jennifer
